Material Literacy & the Global Innovation Academy

Felipe Schmidt Fonseca & Sandra Mamitzsch
Global Innovation Gathering e.V.

How permanent are our project outputs?

LEARNING AND COMMUNICATION

SELF CARE

MOBILITY

DAILY LIVING

THERAPY

OUTDOOR INSTALLATION

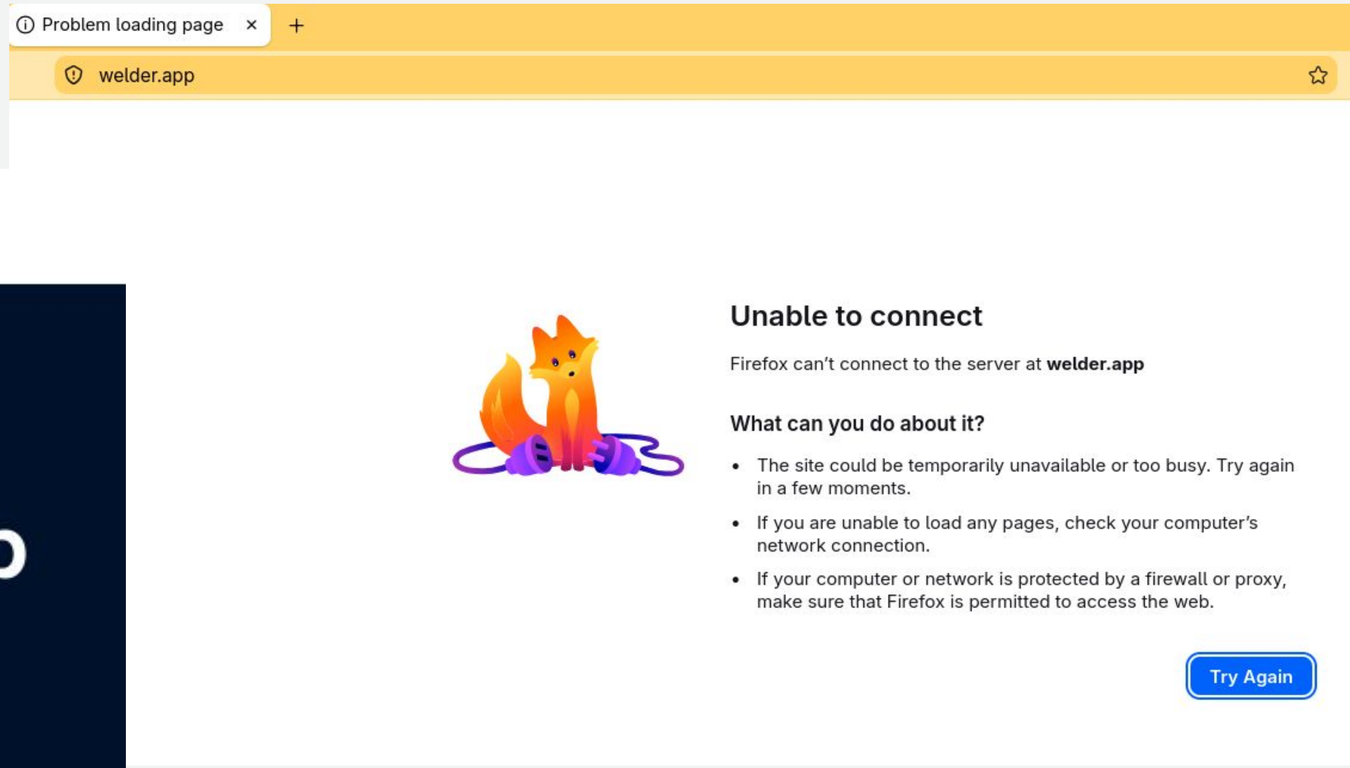

INDOOR INSTALLATION

CAREWARE

FUN/LEISURE

How permanent are our project outputs?

How much open-source knowledge has vanished?
– the GIG case –

In 2018, in a consortium of 8 organisations, we built the Welder app for Careables.org –
by 2025, the partner company got sold and it was gone.

The Critical Making Open Hardware mentoring sessions are currently only available on YouTube.

The mAkE (African European Maker Innovation Ecosystem) MOOC on moodlecloud became unavailable when the responsible partner couldn’t pay the platform bill anymore.

Why does it keep happening?

- Temporary projects → Temporary platforms
- Commercial dependencies
  (e.g. Welder.app, Wikifactory)
- No standardization, leading to inconsistent documentation
- Fragmentation (GitHub/GitLab for code, YouTube for videos, etc.)
- “Doing it right” is too much work

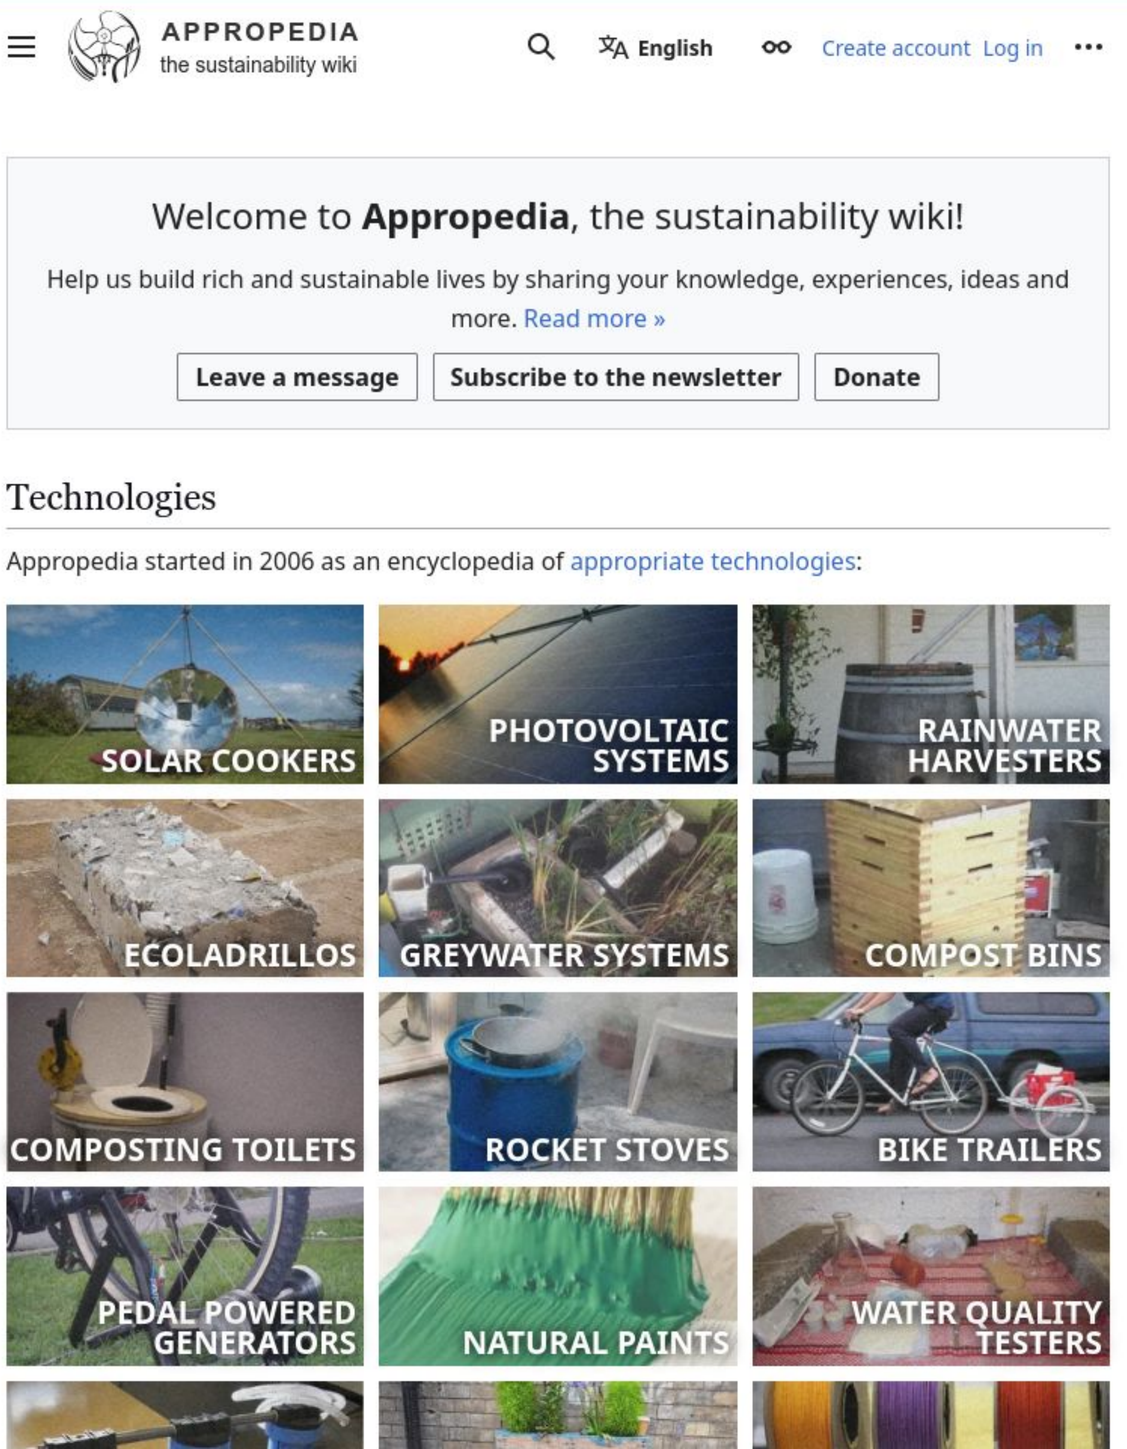

Investing in platforms that last

Open-source + community ownership = (a better chance for) longevity

– but those are not the only components necessary.

- Group acceptance
- Data sovereignty

Investing in platforms that last

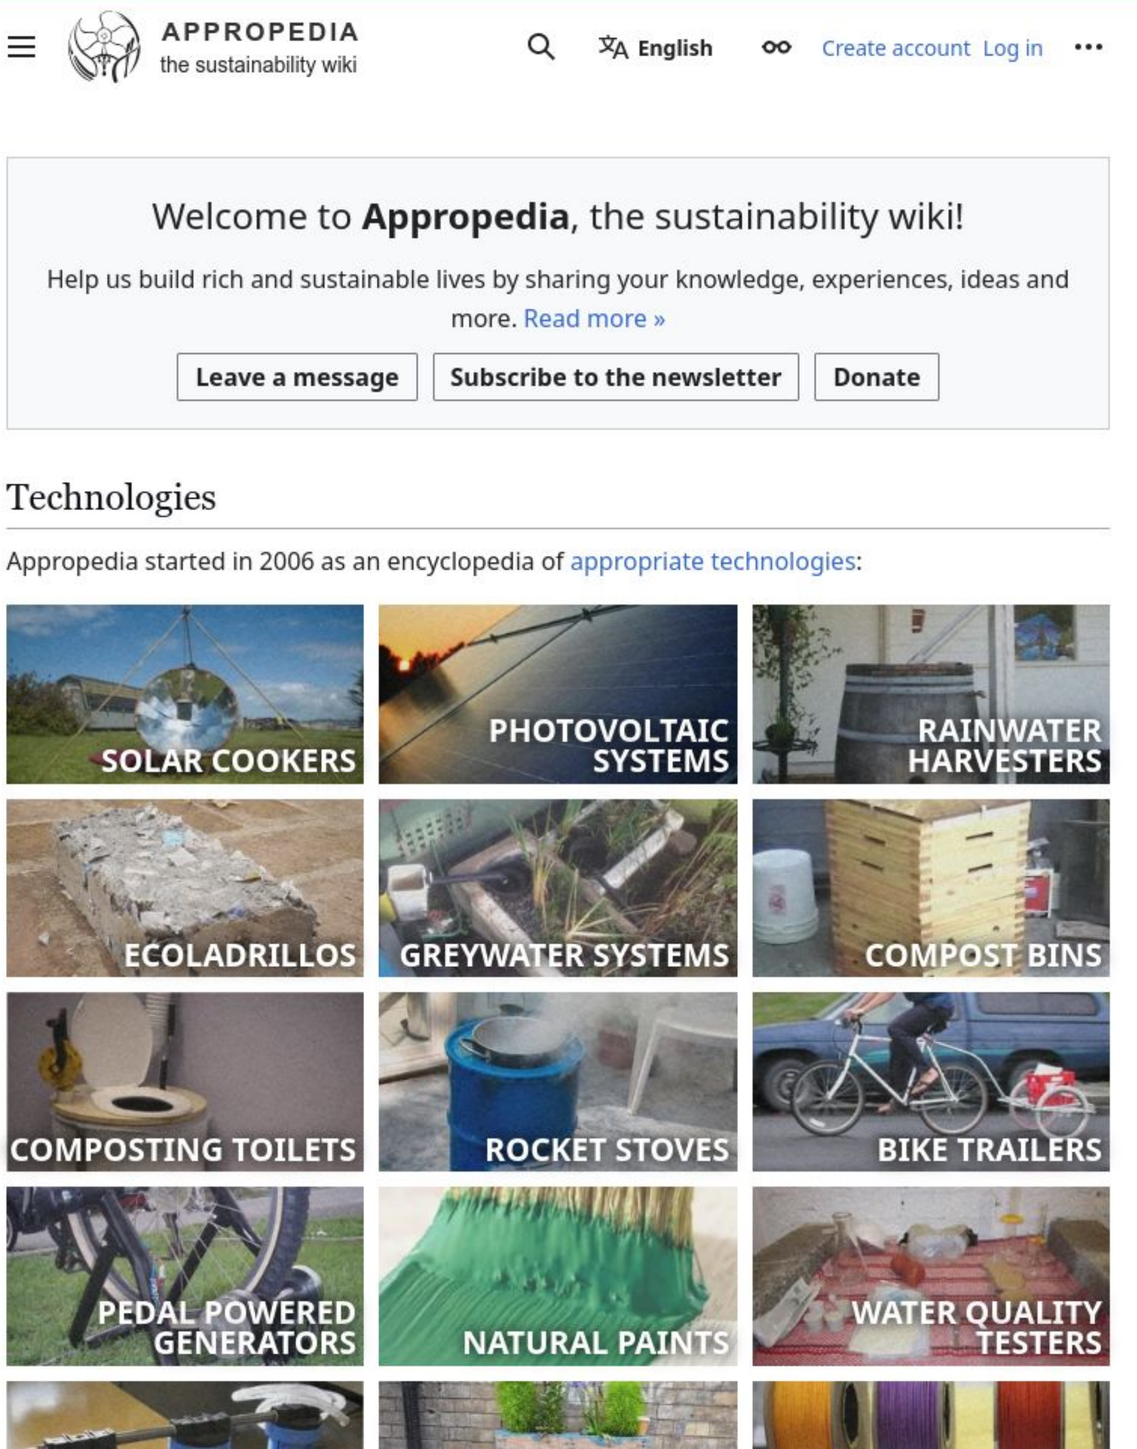

For Open Hardware documentation?

- Appropedia.org (Wiki)
- Codeberg.org (Git)

For static content?

- Zenodo.org
- Archive.org

For courses?

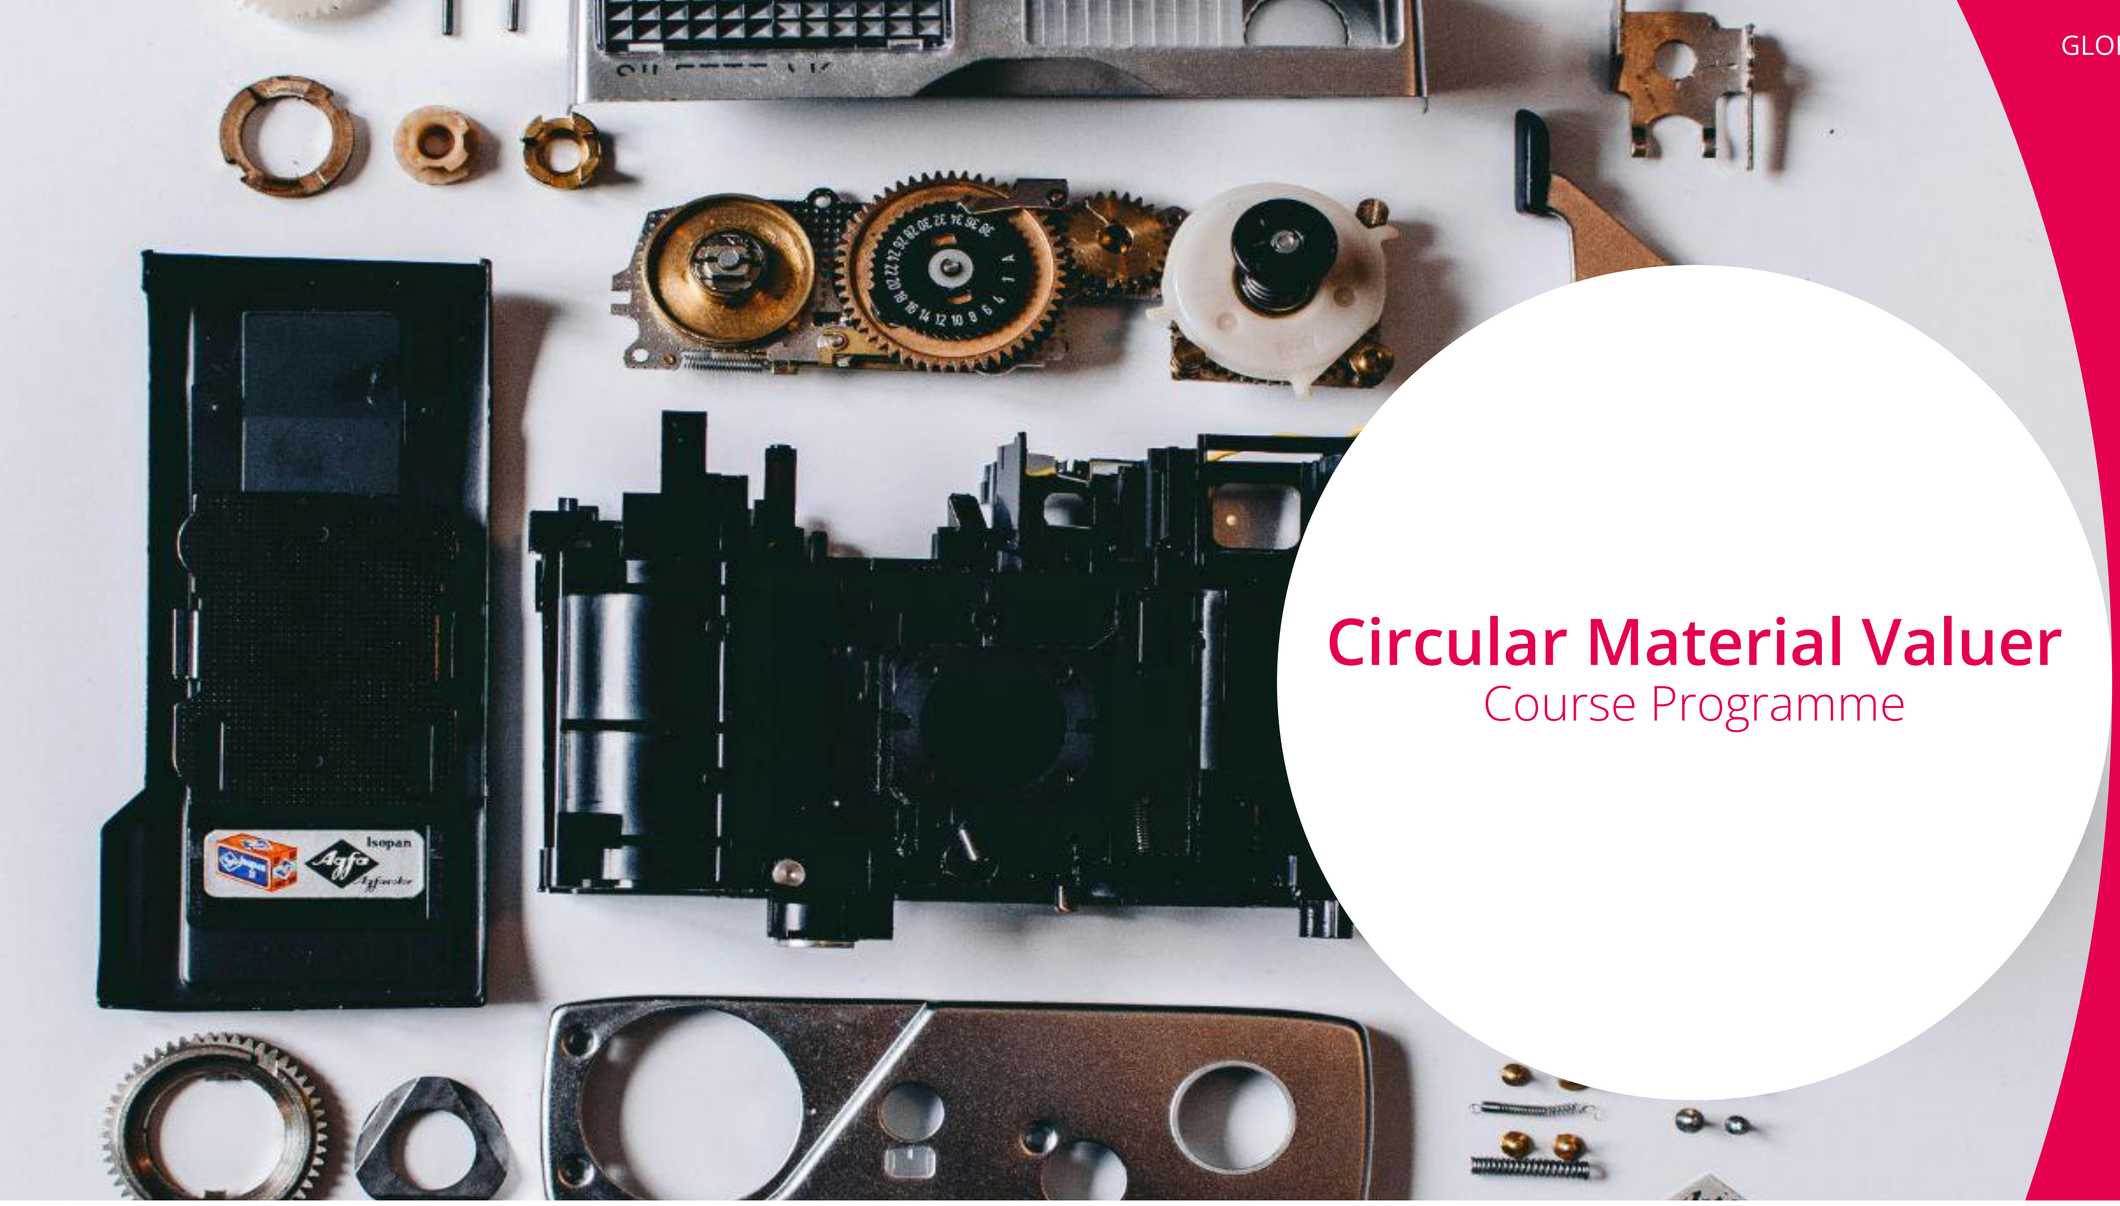

Introducing: the Global Innovation Academy

A permanent, community-owned home for all GIG educational projects, members and wider community

(*our own MOOC platform)*
Currently testing: ***OpenedX***

- open-source
- flexible
- multilingual
- modular

GLOBAL INNOVATION GATHERING

REUSE CITY

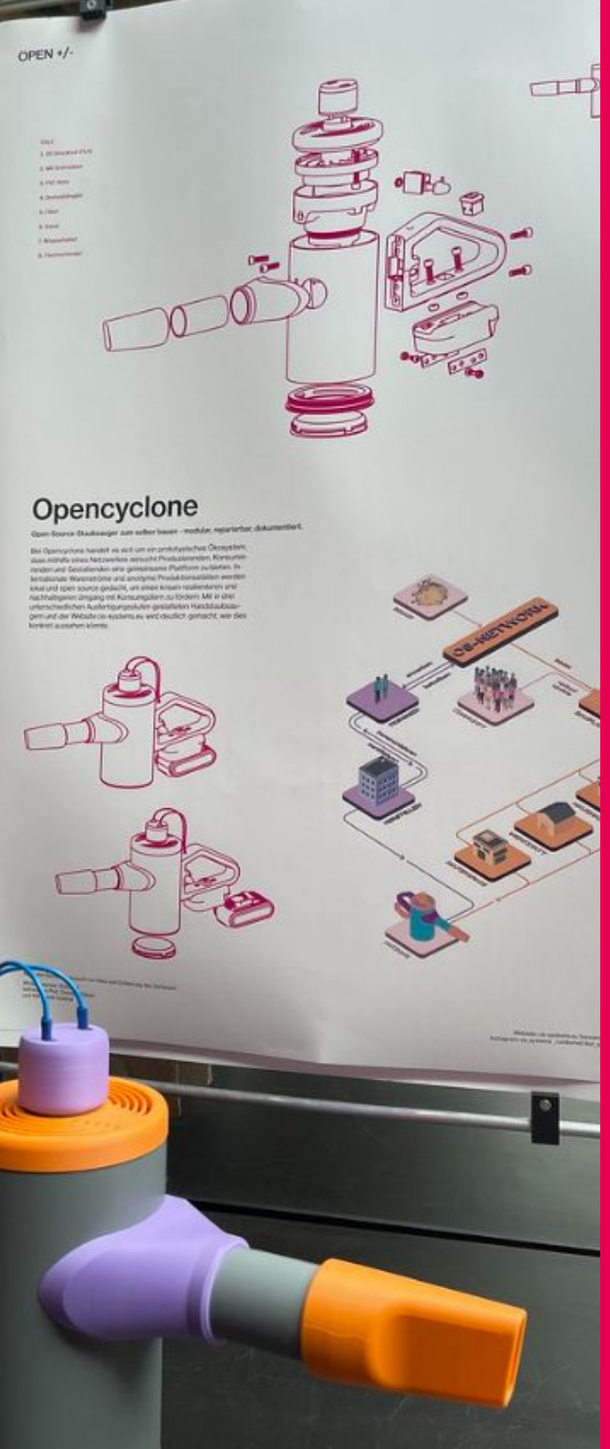

Hans Sauer Stiftung

New project

Collaboratively Advancing Knowledge of Materials – Open Learning Structures for Inclusive Circularity

Key activities

1. Establishing a participatory network of open workshops, repair cafés, makerspaces, and other partner organisations
2. Investigating open-source MOOC platforms and approaches that address our existing and future needs
3. Co-creating the course **Material Literacy and Resource Assessment** (MLRA) through online workshops, design sprints, and collaborative processes
4. Publishing all learning materials, documentation, and methodologies of MLRA as a pilot course on the Global Innovation Academy community learning platform under open licences

GIG Sustainable Making Principles (co-created 2019)

- ★ Make things that make sense
  - governance transparency, community owned, accessible, discoverable
- ★ Share how you make
  - open source documentation and open process, replicability, interoperability
- ★ Integrate local knowledge
  - co-create with the community, learn from mistakes, collaborate, localize
- ★ Include ecosystem services
  - use and give back to open-source projects
- ★ Build to be self-sustaining
  - create a plan how it can last, build circles of communities

Next steps for gig members

Now

★ Fill the form if you are a candidate to participate in the co-design sessions
https://cloud.globalinnovationgathering.org/apps/forms/s/3witbBDWjjwPQ5DD6bLosmDj

★ Recommend other participants with experience on repair/reuse/circularity and/or instructional design and online education

As the project develops (until May 2027)

★ Follow and contribute to discussions on *wearegig*

★ Volunteer to test the pilot course

★ Help share course materials and other outputs

★ Expand the reach of the GIA through collaborations

gig

Thank you!

Questions? Discussion? Collaboration?
